

Anesthesia Admitting Form

Please read, complete, and return this form on the day of surgery

Technician _____

Hospital Staff to complete

Surgery Date: _____ **Pet(s):** _____

Procedure: Spay _____ Neuter _____ (Routine _____ Scrotal Ablation _____ Cryptorchid _____)
Hernia _____ Retained Teeth _____ Dental _____ Ear Crop _____ Growth Removal # _____
Location(s): _____ Pathology _____ Other _____

Cat Declaw: Front Only _____ Rear Only _____ All 4 Paws _____ Oral Antibiotics _____ Injectable Antibiotics _____

For Females: Is your pet in heat? Yes _____ No _____

Are Required Vaccinations Current? Yes _____ No _____ (required vaccinations for dogs: DHLPPV, Bordetella, and Rabies. For cats: FVRCP, Felv, and Rabies)

* If done elsewhere, provide documentation or hospital name. _____

Patient Information:

Yes No
_____ _____ Did your pet eat or drink this morning? When was the last feeding time? _____

_____ _____ Has your pet had any vomiting, diarrhea, or coughing within the past 7 days?

_____ _____ Has your pet ever had seizures? If so, when was the last one? _____

_____ _____ Is your pet allergic to any medications, anesthetics, or vaccines? If so, please list: _____

_____ _____ Is your pet presently on any medication(s) including aspirin? If so, please list: _____

***** **Surgery cost may vary based on options chosen** *****

IV Safety: Intravenous catheter and fluids are the standard of care for all human anesthetic procedures and is advised in our pets to increase safety, protect vital organs, and speed anesthetic recovery. For sterility, hair will be shaved over a vein on the leg so that an intravenous catheter(IV) can be placed. **It is recommended for any age and required for geriatric or sick patients.** This is offered at the discounted fee of \$56.00

_____ I authorize the above IV safety(may be required on some patients)

_____ I do not authorize the above IV safety

Anesthetic Safety: Before your pet is anesthetized, the doctors **recommend** pre-anesthetic screening to help identify potential underlying health issues that may influence the anesthetic protocol. Blood screening also establishes a baseline of values in case future medical conditions should arise. **Bloodwork may be required in some pets.**

_____ **Profile 1 \$45.00** Recommended for healthy pets younger than 6 years Pre-anesthetic:
Creatinine(Kidney), BUN(Kidney), ALKP (liver), ALT (liver),
Glucose(Sugar), TP(Hydration), and electrolytes.

_____ **Profile 2 \$ 77.00** Recommended for healthy pets 6-9 years old Pre-anesthetic with CBC:
Includes all test in profile 1, plus; Complete blood count(assess

anemia, infection, and clotting.)

Profile 3 \$ 102.00 Recommended for healthy pets 9 years or older or those with questionable health status.
General Health Profile: Includes all test in profiles 1 & 2, plus ALB (protein), Amylase(pancreas), Bilirubin(liver), Phosphorus(kidney), and Cholesterol. Complete blood count(assess anemia, infection, and clotting.)

I am **declining** the recommended pre-anesthetic blood screening and request that you proceed with anesthesia. I fully understand that anesthesia and surgery always carry a potential risk.

Laser: Just as in people, laser surgery provides advanced care for your pet by allowing for more rapid recovery and less post-operative complications. Please carefully read the laser surgery pamphlet for all the advantages or ask a staff member. The cost is \$35 for routine procedure.

Yes, I accept laser surgery. No, I decline laser surgery. Not Applicable

Pain Medication: To ensure the best care for your pet, pain medication is recommended before, during, and after surgical procedures. For many of our routinely performed procedures we have already included the initial dosage of pain medication in the cost of the surgery. However, we also recommend pain medications to be given to your pet while recovering at home. If you would like us to prescribe medications for pain control please indicate below.

Yes, I am interested in pain control at home. *Pain medication is required for all declaws.

No, I decline pain medication to go home.

Microchip: I would like microchipping performed on my pet while under anesthesia. We use the Home Again pet identification and retrieval system. Additional cost of \$53.99 and that includes the national enrollment fee.

Yes, I accept No, I decline

*****FOR DENTAL PROCEDURES ONLY*****

It is impossible to predict how many teeth may need extraction when an animal is awake because tartar and movement interfere with the assessment. Severely diseased teeth can cause considerable pain and discomfort and are a source of infections for other organ systems(liver, kidneys, lungs, and heart). During the dental cleaning, the teeth are evaluated, and if found to be too severely diseased oral surgery may be required to extract teeth that are not easily removed. **The cost of extractions varies depending on the difficulty and can range from \$18.00 to \$145.00 per tooth.**

I authorize all medically necessary extractions to be performed.

I prefer to be called before any extractions are performed. If I cannot be reached, I authorize you to proceed with all necessary dental procedures.

If I cannot be contacted by phone, I do **NOT** authorize complicated extractions to be performed. **Please be aware that if you decline any needed extractions, your pet would need a second anesthesia at another time for those procedures to be performed.*

I would prefer to seek out a dental specialist for further treatment such as root canals, fillings, and advanced orthodontics.

Please note that if your pet has external parasites(fleas, ticks, ect), they must be treated prior to surgery and this will be at the owner's expense.
